### AUTO HEADLIGHT LEVELER

Corrects headlight beams for lowered vehicles.

- Direct factory replacement 100% bolt on.
- Adjustable length via turnbuckle for any ride height.

The modern automobiles of today are equipped with an automatic headlight leveler that adjusts to the vehicle's ride height in real time. However when the vehicle suspension is altered (in most cases lowered), the headlights are pointed down towards the ground. This is due to the leveler sensor being stationed only in the rear of the car. In some cases, the ECU can reset to readjust the headlights according to its vehicle height, however there are parameter limitations for electronic sensors which will eventually require a mechanical approach to the solution.

**Stock ride height with stock auto levelizer**

Only rear height was changed. Stock Ride Height
